jared mathews

clumsycomputer@gmail.com

brief

a balanced frontend developer who has worked on a variety of products across several companies

status

focused on sharing, documenting, and developing **graphics-renderer**, an open-source tool for rapidly developing animations where frames are described with svg à la react

---

wyyerd intuition

engineering

frontend developer

2022.06 – 2022.02

product

a web app aimed at internet service providers that assists employees in scheduling and completing a variety of tasks ranging from managing network infrastructure to analyzing client subscriptions

responsibilities

- provide thorough and detailed code reviews with an emphasis on iteration
- refactor a number of entrenched components in order to enable a requested feature or fix an outstanding bug while minimizing breaking changes to existing apis
- adapt and bend third-party component libraries to support undocumented use-cases
- participate in establishing best practices for frontend development with a focus on component composition that is fairly formulaic in implementation and resulted in code that was more straightforward to reason about
- participate in sprint planning and issue prioritization
- collaborate with teammates on problems where unobivous or unique solutions were required

tech

vue@2 apollo bootstrap playwright typescript scss graphql

git
